

ALMIRALL AGREES STRATEGIC TRANSACTION WITH ASTRAZENECA IN RESPIRATORY DISEASE

Agreement allows Almirall to evolve its respiratory strategy to maximise the return and value of its assets and capabilities while it improves the financial position providing the support for growth in dermatology and other specialty areas.

Barcelona, 30th July 2014

Almirall today announced that it has entered an agreement to transfer to AstraZeneca the rights to Almirall's respiratory franchise for an initial consideration of \$875 million on completion, and up to \$1.22 billion in development, launch, and sales-related milestones. AstraZeneca has also agreed to make various sales-related payments.

Upon completion of the transaction, AstraZeneca will own the rights for the development and commercialisation of Almirall's existing proprietary respiratory business, including rights to revenues from Almirall's existing partnerships, as well as its pipeline of investigational novel therapies. The franchise includes Eklira[®] (aclidinium); LAS40464, the combination of aclidinium with formoterol which has been filed for registration in the EU and it's being developed in the US; LAS100977 (abediterol), a once-daily long-acting beta2-agonist (LABA) in Phase II; an M3 antagonist beta2-agonist (MABA) platform in pre-clinical development (LAS191351, LAS194871) and Phase I (LAS190792); and multiple pre-clinical programmes. Under the agreement, Almirall Sofotec, an Almirall subsidiary focused on the development of innovative proprietary devices, will also transfer to AstraZeneca.

This transaction improves Almirall financials and it is immediately accretive.

Almirall's pipeline of novel respiratory assets and its device capabilities further strengthen AstraZeneca's respiratory portfolio, which includes Symbicort[®] and Pulmicort[®], as well as the company's investigational medicines in development. The addition of aclidinium and the combination of aclidinium with formoterol, both in proprietary Genuair[®] device, will allow AstraZeneca to offer patients a choice between dry powder inhaler and metered dose inhaler devices across a range of molecules and combinations.

Almirall and AstraZeneca anticipate that, subject to local consultation and legislation, a significant number of employees dedicated to the respiratory business, including Almirall Sofotec employees, will transfer to AstraZeneca.

Jorge Gallardo, President of Almirall said: "This important agreement allows to better develop our assets and expertise in respiratory with AstraZeneca, an experienced player in this therapeutic area. It also allows us to better balance the costs, risks and returns of the respiratory business while retaining an important economic interest in its

future success. All this constitutes a very solid baseline to move more aggressively in specialty areas and particularly towards becoming a global dermatology player. R&D will remain a key part of Almirall's business going forward and hopefully a significant long-term growth driver."

Pascal Soriot, Chief Executive Officer of AstraZeneca said: "Our agreement with Almirall brings strategic and long-term value to AstraZeneca's strong respiratory franchise, one of our key growth platforms. We will benefit from immediate and growing product revenues which we anticipate will be rapidly accretive to earnings. Chronic respiratory disease affects hundreds of millions of people around the world. By combining our innovative portfolios and leveraging AstraZeneca's global scientific and commercial capabilities, we will strengthen our ability to address the entire spectrum of care in asthma and COPD. I very much look forward to welcoming the Almirall people to our company."

The transaction is subject to anti-trust and competition clearances, customary terms and conditions. The companies anticipate the transaction to complete by the end of 2014.

NOTES TO EDITORS

About COPD

COPD (chronic obstructive pulmonary disease) is a progressive disease associated mainly with tobacco smoking, air pollution or occupational exposure, which can cause obstruction of airflow in the lungs resulting in debilitating bouts of breathlessness. It affects an estimated 210 million people worldwide and is predicted to be the third leading cause of death by 2020. Although COPD is widely regarded as a disease of the elderly, 50 per cent of patients are estimated to be between 50 and 65 years of age, meaning half of the COPD population is likely to be affected at a stage in their life when they are at the peak of their earning potential and are likely to have major family responsibilities.

About Asthma

Asthma is a chronic inflammatory disorder of the airways in which the bronchi are reversibly narrowed. It affects people of all ages and is a significant source of morbidity and mortality worldwide. Asthma can be allergic (induced by an immune response to inhaled allergens such as pollen, fungal spores or dust mite particles) or non-allergic (induced by exercise, cough, viral respiratory infection, or inhalation of smoke or chemicals in the workplace). The airway narrowing characteristic of asthma is a response of the immune system to the asthma trigger.

Severe persistent asthma is classified by the frequency of symptoms throughout the day and night, use of reliever inhalers, interference with daily activities, peak flow readings and whether asthma exacerbations require use of inhaled corticosteroids (ICS) more than twice a year. Asthma treatment usually includes ICS that reduce

inflammation of the airways to prevent asthma symptoms and exacerbations, combined with long-acting β_2 -agonist bronchodilators and a short-acting β_2 -agonist or other bronchodilator for relief.

About Almirall

Almirall is a global company based in Barcelona dedicated to providing valuable medicines through its R&D, agreements and alliances. Our work covers the whole of the drug value chain. A consolidated profitable growth allows us to devote our talent and efforts in the respiratory and dermatology areas, with a focused interest in gastroenterology and pain. Our size enables us to be agile and flexible so that we can accomplish the purpose of taking our innovative products wherever they are needed.

Founded in 1943, Almirall is listed on the Spanish Stock Exchange (ticker: ALM) and it has become a source of value creation for society due to its vision and the commitment of its long-standing major shareholders. In 2013, its revenues totaled 825 million euros and, with more than 3,000 employees, it has gradually built up a trusted presence across Europe, as well as in the US, Canada and Mexico.
